

Pro Series Whole House Water Filters

These easy-to-use and versatile filters offer an internal bypass so you'll always have continuous water during the backwash and regeneration cycles. An external bypass valve is included as well for ease of service.

What is the benefit of carbon filtration?

Carbon has been found to remove or reduce volatile organic compounds (VOCs) such as:

Alachlor	Haloketones (HK)
Atrazine	1,1-Dichloro-2-Propanone
Benzene	1,1,1-Trichloro-2-Propanone
Carbofuran	Heptachlor
Carbon Tetrachloride	Heptachlor Epoxide
Chlorobenzene	Hexachlorobutadiene
Chloropicrin	Hexachlorocyclopentadiene
2,4-D	Lindane
DBCP	Methoxychlor
o-Dichlorobenzene	Pentachlorophenol
p-Dichlorobenzene	Simazine
1,2-Dichloroethane	Styrene
1,1-Dichloroethylene	1,1,2,2-Tetrachloroethane
cis-1,2-Dichloroethylene	Tetrachloroethylene
trans-1,2-Dichloroethylene	Toluene
1,2-Dichloropropane	2,4,5-TP (Silvex)
cis-1,3-Dichloropropylene	Tribromoacetic Acid
Dinoseb	1,2,4-Trichlorobenzene
Endrin	1,1,1-Trichloroethane
Ethylbenzene	1,1,2-Trichloroethane
EDB	Trichloroethylene
Haloacetonitriles (HAN)	Trihalomethanes (THMs)
Bromochloroacetonitrile	Bromodichloromethane
Dibromoacetonitrile	Bromoform
Dichloroacetonitrile	Chloroform
Trichloroacetonitrile	Chlorodibromomethane
	Xylenes

Do not use with water that is microbiologically unsafe or of unknown quality, without adequate disinfection before or after the system. See Performance Data Sheet for more information.

Key Benefits:

1. Cleaner, better tasting water from every tap, faucet and shower.
2. Reduce health risks associated with chlorine and disinfectant by-products.
3. More cost-effective and convenient than bottled water.
4. Increases the life of your plumbing, fixtures and water using appliances.
5. No more refilling the cooler or lugging bottled water from the store.
6. Removing or reducing the chlorine or chloramine and the harmful disinfectant by-products by filtering your water, you can reduce your risk for associated illnesses and diseases.
7. When it's always there and tastes great, you drink more and that's good for your health.

Eco-Friendly Factors

- No more bottled water waste.
- Uses 1/10 the energy required for a water cooler.
- Backflush can be used for irrigation.

PRO SERIES WHOLE HOUSE WATER FILTERS
Great water is no problem.

Contact us with any questions or for more information:

The customized computer controlled valve is programmable allowing your service provider to program the backflush cycle for maximum efficiency based on your water usage. The computer in the head stores data that can be monitored to determine if the cycle should be altered or if the carbon needs to be replaced. On average a 1.5 cf system will last a family of four 10 years.

Granular Activated Carbon (GAC) filters impurities from your water.

How it works:

1. The filter is installed between the main water line and the interior pipes.
2. Water enters the filter where it passes through the GAC, and impurities are removed or reduced all the way down to 5 microns.
3. Water then passes out of the filter and into your home, providing clean great tasting water from every tap.
4. Based on the preset backflush cycle, the filter will self flush, cleaning itself of the dirt and freshening the carbon bed to create more surface space for maximum effectiveness.

The smart, economical way to enjoy the best water possible.

Why is water filtration so important?

Your body is over 80% water. Shouldn't you put the best water you can back into your body? Pro Series Whole House Water Filters are manufactured to the highest standards in America to make sure your family is getting the best water possible. In fact, Pro Series Water Filters deliver the highest quality water you can get without the hassle or cost of bottled water.

The 2008-2009 Annual Report by the President's Cancer Panel about Reducing Environmental Cancer Risk states "It is vitally important to recognize that children are far more susceptible to damage from environmental carcinogens and endocrine-disrupting compounds than adults. To the extent possible, parents and child care providers should choose foods, house and garden products, play spaces, toys, medicines, and medical tests that will minimize children's exposure to toxics. Ideally, both mothers and fathers should avoid exposure to endocrine-disrupting chemicals and known or suspected carcinogens prior to a child's conception and throughout pregnancy and early life, when risk of damage is greatest."*

The report identifies such environmental carcinogens as the same Chlorine used to treat municipal water or the chemical bisphenol A (BPA) which may be found in plastic drinking bottles.

Many public and private water supplies require extra treatment to reduce sediment and turbidity, iron, manganese or hydrogen sulfide. Our filters can handle these problems efficiently and economically.

What can I do to reduce or eliminate chemical exposures?

Reducing your exposure is as easy as taking a few simple steps, such as introducing a Whole House Filtration System. "Filtering home tap or well water can decrease exposure to numerous known or suspected carcinogens and endocrine-disrupting chemicals. Unless the home water source is known to be contaminated, it is preferable to use filtered tap water instead of commercially bottled water."*

Cutting out the bottled water isn't enough. According to studies done by TV talk show personality Dr. Oz, you absorb more chemicals in a 10 minute hot shower than by drinking eight 8 ounce glasses of tap water.**
